

SR2MyGuard™ v1.0

What is SR2MyGuard™? It is a tool that keeps track your incoming and outgoing visitors in your premises. It provides information such as the people they meet in your premise, time-in and out, and other information you wish to know about your visitor such as visitor contact number, meeting person, and many more.

SR2MyGuard™ is a customized based software. This means it can be tweaked to suite your needs at best. It can be used as part of your security system. This tool is something you might want to have as it provides evidence of people entry and their whereabouts during and after getting into your premise.

It captures the information from the visitor's MyKAD in seconds thus eliminates the long queue for your visitors to enter your premise. No technical knowledge required to run the software. This gives an advantage for those who are not computer literate to be able to run the software without any hassle. Therefore, it is very suitable to install SR2MyGuard™ over at your security post or any main entry points.

It has two versions in which one is network based and the other is simply a standalone. The standalone version runs on a single PC/terminal and visitors data are stored in the same PC/terminal. For the network based, the SR2MyGuard™ is stored in a single PC/terminal but the data can be accessed from other PCs/terminals using its own tool known as SR2MyGuard™ Admin. With this network feature, it allows you to check all your visitors data remotely as long as you are connected to the internet/network. Of course, such ability only be given to a specific user. Either you bought the standalone or network based SR2MyGuard™ version, you do not have to worry for any data breached from your security personnel because only a specific user who granted permission to run SR2MyGuard™ Admin can view the data stored.

Min System Requirement

Processor	Pentium III or better
OS	Windows 98, NT, 2000, XP
Hard Disk Space	10Mb
Memory	256Mb (512Mb/1Gb Recommended)
CD Rom	Yes
