

# secure™

“If you are looking for a total security integration system that will not just protect your valuable premise or object, also able to monitor and provide tight security elements that comprises Access Control, CCTV/IP camera, Guard Tour, Time Attendance, Alarm System, HVAC/Elevator System and Visitor Management System in one single platform, SR2secure™ is what you need”

The SR2secure™ is the hybrid intelligent application that combines all security features to be controlled and monitored on a single platform.

These security features are:

- > Access Control
- > CCTV or IP camera
- > Security Alarm System
- > Parameter Detection System
- > Parking Barrier System
- > HVAC and Elevator System
- > Guard Tour System
- > Visitor Management System
- > Time Attendance System
- > Badging Design & Print

The SR2secure™ provides detail reporting for every part and components attached to the system. It can integrate with any smart cards as well as our MyKAD via attachment of any smart card readers.

The Badging feature built inside SR2secure™ allows you to design and print your users information onto smart card. It also gives you the ability to store the data onto the secure database that makes monitoring process become precise and sophisticated. With the FARGO printing technology, it allows you to print and store user information onto the smart card all in one go.

The SR2secure™ comes in few versions that cater the usage for home owners, business owners, school, colleges, universities and government agencies. In addition, it can still be tweaked and tuned to fit with your requirements which later makes it very unique for your security system.
